Re: Request for records missing from those produced pursuant to EPA-R4-2021-004118

On May 4, 2021 I requested from EPA via FOIA: "Certain records referenced within the Phase I-III reports for the administrative record for the 35th Ave. Site (Birmingham, AL). Namely: 1. From Phase I Report: ref. 15: OTIE. Phase 1 Removal Depth Sampling Report. Revision 0. 35th Avenue Site. June 30, 2016; 2. From Phase II Reports: Ref. 15 OTIE. Phase II Removal Depth Sampling Report, Revision 1. February 17, 2017; Ref. 17 Birmingham Board of Education Sampling and Removal Report. September 17, 2018 (would these be available at the library as part of the site record/does EPA have them? Or do I need to request from the Board of Education?), Ref. 18 Public Housing Authority Sampling and Removal Report. September 12, 2018 (would these be available at the library as part of the site record/does EPA have them? Or do I need to request from the Housing Authority?); and 3. From Phase III Report: Ref. 15 OTIE. Phase 3 Removal Depth Sampling Report, Revision 1. February 17, 2017 (from EPA)."

Records were produced on June 4, 2021. However, certain records were missing in this production. **I would like to submit a new request for those missing records that include:**

- 1. copies of the Phase I and Phase II Removal Depth Sampling Reports as well as the appendices of the Phase III Removal Depth Sampling Report.**
- 2. I request that all post-12/31/13 investigation results for the Site be tabulated in the same format used in the EPA Removal Investigation Report of 12/31/13 and that the subject tables be included in the Phase I, II and II Removal Depth Sampling Reports. I specifically request that a Summary of RML Exceedances per the format of Table 8 (attached to this request) be provided and include all surface, subsurface and post-excavation soil sample results for arsenic, lead and benzo(a) pyrene.**
- 3. As Figures 5, 6 and 7 in the report of 12/31/13 appear to be confidential information, figures comparable to these need not be included. However, I would request a map of all sample locations (without sample location numbers).**

Sincerely,

Haley Colson Lewis
